Opis produktu

The aluminized green type high-temperature urethane primer is designed for use under urethane-based products and is a great choice for areas of the aircraft that are exposed to high heats. The primer allows the topcoat to better adhere to the surface of the aircraft, even when conditions are less-than-ideal. The high-temperature primer is sold in a 4:1:4 quart-size kit and is designed to be mixed just prior to use for maximum effectiveness.

Boeing PN/Spec#: BAC 5710 Type 51
Spec: BAC 5710 Type 51
Manufacturer P/N: 825-009/910-175
