Opis produktu

Aveo MaxiMini™ - the ultimate recognition light.

Spawned from the incredible technology of the incredible and unmatched RedBaron™ AntiCollision series, the new MaxiMini™ is the world's brightest and smallest recognition light, at only 27 mm high and weighing only 85 grams. Its lightweight, aerodynamic and low-profile design make this the light of choice for any certified aircraft requiring a rear coverage light due to wingtip light coverage zone limits.

30 High brightness LEDs for ANTICOLLISION 360° coverage and RECOGNITION 180°

The RedBaron MaxiMini™ version incorporates 30 of the brightest LEDs available in the world today, with chromacity and intensity compliant to all international aviation and safety standards. The optical performance is incredible, and these are the ideal replacement unit for any recognition light system in existence.

The MaxiMini™ only comes in aviation white led color, since it is 43% brighter than red leds, which means you will BE SEEN, NOT SORRY for sure!

No separate strobe power box is needed. It is quite simply the lowest weight solution you can get, in 9 to 36 volt input range too!

All Aveo lights are waterproof, dust proof, and inert to most environmental conditions as they are all tested to categories of DO-160 exceeding the applicable requirements by far in external laboratories experienced in compliance demonstration of EASA ETSO appliances.
