Opis produktu

Castrol Braycote™ 806 is a smooth, buttery, translucent white NLGI #2 grease based on a perfluoroether base oil. It is thermally stable, nonflammable, and chemically inert to commonly used fuels, solvents and oxidizers. Brayco IC X-100 (formerly Fluoroclean™ X100) can be used to remove this lubricant. Refer to the data sheets for information regarding these products.

Application :

Braycote 806 is designed for static and dynamic lubrication of taper plug valves, gaskets and bearings in fuel systems of aircraft and ground support equipment. It is also suitable for use in the presence of oxygen (LOX/GOX) as a lubricant for valves, threads, and bearings in aerospace vehicles and supporting equipment. Perfluorinated greases, such as Braycote 806, exhibit excellent shelf lives due to their inertness.

Braycote 806 meets the requirements of and is qualified under MIL-PRF-27617F, Type III.

Temperature Range: -30°C to above 204°C (-22°F to above 400°F).
