Opis produktu

Avionics Battery for lighting, standby, emergency power. Protects and extends the life of other avionics. Concorde Emergency Batteries float directly on the DC buss with no need for a dedicated charger. This results in a high inrush current which extends battery life with a fast recovery time from discharge. With the battery floating directly on the buss, transient spikes in the DC power are absorbed. These batteries are self-regulating on charge and will take only the current required to maintain it at full charge. Test Temperature @ 23°C (74°F) = C1 3.30 Ah Test Temperature @ -18°C (0°F) = C1 2.1 AH Test Temperature @ -30°C (-22°F) = C1 1.5 AH Recombinant Gas - The RG® Series are low resistance, valve-regulated lead-acid (VRLA) batteries. Low impedance design maintenance free Constructed with nonremovable vent valves - no addition of electrolyte or water required acrobatic: Non-spillable at any altitude or attitude individually factory tested to assure airworthiness Manufactured with absorbed glass mat separators (AGM) Proprietary PolyGuard® separators around the plates protect and extend battery life. The use of additional separators is unique to Concorde.
