EI VA1A VOLT & AMP W/ INTERNAL SHUNT PRIMARY 2-1/4" PMA

Cena brutto **1 702,92 zł**

Cena netto **1 384,49 zł**

Kod producenta **VA-1A**

Opis produktu

Click here for details Expires September 30, 2017, These Digital/Graphic Instruments are solid-state and hold their accuracy over time and under a range of environmental conditions. The colorful Graphic Analog display emits green, yellow, or red light enabling the pilot to spot problems immediately without interpreting a needle. The Digital display constantly provides an exact indication of each instrument function. Gauges mount in 2-1/4" instrument holes. These instruments (except fuel level) are STCd & TSOd for certificated aircraft. VA-1A VOLTS/AMPS INTERNAL AND EXTERNAL SHUNTS The VA-1A is an FAA/PMA approved instrument that features a discharge warning light to act as an early warning device alerting you as soon as discharging begins. This is critical in giving the pilot as much time as possible to reduce electrical load and extend the life of the battery in flight. Also, by monitoring load currents to .1 amps the pilot can check important aircraft functions such as retracts, boost pumps, transmitter power, pilot heat, navigation lights, transponder, strobes, and any other electrical equipment. The VA-1 can replace your existing amp gauge. It is backlit for night operation and operates on 12 or 24 volt systems. Available with the internal or external shunt. Wt. 9 Oz. E.I. products include all documentation.
