Opis produktu

Michelin® AIR X® radials typically weigh 20-30% less than comparable bias tires, and they operate at cooler temperatures.

Michelin's carcass design helps restrict tire growth and the stretching of rubber. Durable cut-resistant tread includes deep skid depth and specially-designed circumferential grooves.

Sidewall is optimized for both ozone and ultraviolet light protection which helps reduce ozone cracking in key areas of the tire.

The Michelin® AIR X® casing is more flexible than casings used in bias tires.
